

PowerCurtain CL-820 Folding Track Connecting Instructions

Due to the length restriction by the carrier, automatic curtain track sent to you with 2 sections to be connected.

We tie the 2 sections of track & steel wire together as the left photo shows.

Unfold the 2 sub-tracks & align them head-to-head as above pictures show.

Slide the attached Track Connector to the joint & tighten the screws to secure the 2 sub-tracks.

Then make sure the 2 steel wires inside the track channel are not twisted. They have to be separate & parallel, from head to tail. Otherwise separate them with a screwdriver.

The tension of the steel wires has been pre-adjusted before our shipment. You could adjust them by yourself following our instructions: [Instructions](#)

IMPORTANT NOTE

It is important to read the instructions before/during the installation.
