

PowerCurtain Roller/Roman RL/RM-400 Brackets Attachment

Springed end tip of the motor

To attach the bracket & the motor together, as the picture indicates, hand hold the tubular motor's power cord backward, in order not to have it contact the bracket. Pushing the bracket too hard could cut or damage the power cord.

While pressing the springed end tip of the tubular motor, align the bracket's groove with the motor's bracket channel. Finger press the end tip & carefully slide in the groove until the end tip fits into the square hole.

For another end of the rod, just insert the end tip of the crown into the square hole of the bracket & secure with cotter pin.
